The **Disinfectable shells** are made with corrugated aluminium core embedded in polyethylene foam and covered with polyethylene foil on both sides. This allows not only the washing but also the disinfection of the products, making them suitable for multi-patient use. They are delivered without straps.

Shell product versions - **without straps** - marked with (S) also available for several orthoses.

Marked with (C) are available in **extra small sizes** for children.

CHRISOFIX®

— The flexi-fix healer —

Why Chrisofix® ?

- ensures a safer **stable semicircular or circular fixation**,
- can be **adjusted and re-adjusted** within one minute, without water or heat,
- can provide more **efficient and targeted immobilisation** than usual fixation products,
- can offer **cost efficiency** both for users as well as for hospitals (quick usage),
- can allow more **convenient daily hygiene** and an earlier start of physiotherapy,
- can replace and **eliminate most of the thermoplastic fixations**,
- are **light and comfortable** similarly to the usual splints,
- can be re-adjusted and **reused by several patients** after disinfection and exchange of the liner.
